

Cloud hosting improves performance for automated payments solution SnapPay

SnapPay is an automated payments solution from Fiserv that integrates with major enterprise resource planning (ERP) systems like Microsoft Dynamics 365. Delivering accounts payable and accounts receivable services for large and mid-sized companies, SnapPay was originally developed as on-premises technology. When it came time to move to the cloud, Fiserv considered several enterprise cloud platforms but chose Microsoft Azure because of its capabilities and the support from Microsoft. Now the implementation time is faster, high-volume processing is improved, and the migration from on-premises to cloud is proceeding smoothly.
